

Continuous Updates

How Do I get a Copy?

Go to the Support Planning Integrated Data Enterprise Readiness System (SPIDERS) to obtain an updated copy of the DTB.

<https://spiders.dla.mil/>

- From the SPIDERS home page, select "New User Registration"
- Follow the process for obtaining a "Customer" user account
- After receiving your user ID and password, login
- Select the "DLA Deployment Tool Book" link

*Updates will occur continuously.
Recommendations for changes,
additions, or deletions can be
sent to: doug.polson@dlamail or
carl.williams@dlamail*

DLA Deployment Tool Book

Obtain Critical Supplies and Equipment

The Deployment Tool Book (DTB) is intended to provide detailed assistance to deploying or deployed units in obtaining critical supplies and equipment that they need to plan and execute their missions. The Deployment Tool Book will accomplish this in several ways:

- By providing National Stock Number (NSN) level of detail for critical supplies across multiple commodities and equipment that are managed by DLA. This will directly assist in requirements determination, advanced planning, and in execution/re-supply to identify what is needed to accomplish the mission.
- By providing contact information for the DLA Liaison Officers (LNO's) at the Combatant Commands, and Customer Support Representatives (CSR's) at the Service Major Subordinate Commands (MSC's).
- By providing descriptions of the DLA Regional Commands and their contact information as well as Point of Contact (POC) information for DLA Commodity managers and Prime Vendors.
- By providing be a section that describes the Industrial Base Extension (IBEX) program where deploying units can find commercial vendors in countries by the Geographic Combatant Command Area of Responsibility (AOR). IBex vendors are a safety net when standard procurement processes are not sufficient.
- By providing access to the global DESC Into Plane contract listing.

Consult Multiple Supply Classes

The book will cover the following classes of supply:

- Class I (Subsistence)
- Class II (Individual Equipment)
- Class III (Petroleum, Oils and Lubricants), to include the global DESC Into Plane Contract data
- Class IV (Construction)
- Class VI (Personal Demand Items)
- Class VIII (Medical)
- Contact information for Class IX (Repair Parts)

Other Information Available

- EMALL
- JLOC Contact Information
- DCST Program

Automatically Update and Tailor Information

There are several aspects of the DTB that make this resource unique and tailorable to your needs. As you know, hardcopies of any document quickly become obsolete until the next reprint. Since the DTB is an electronic publication that pulls data from the SPIDERS database, you can obtain the most current version reflecting daily data changes by downloading a fresh copy off of the SPIDERS website. You can download a new version every day and it will be completely up to date each day.

In addition, you can download the full version off of SPIDERS (covering all GCCs) or you have the option to select a customized, shorter version tailored to one or more GCCs of interest, based on the parameters you enter. For shorter versions, the information in the DTB regarding DESC OCONUS Into-Plane contract data and the Industrial Based Extension (IBex) macro data only show support for the GCC(s) you select. This feature makes your custom version of the DTB specifically relevant to the customer's deployment location(s) and reduces unnecessary information and printing costs.
